SUMMARY

BS Artificial Intelligence graduate with practical experience in machine learning, and AI-based automation. Skilled in modern development tools, cross-platform application workflows, and writing structured, maintainable code. Comfortable working in collaborative environments and managing technical requirements from concept to implementation. Currently focused on applying academic knowledge to real-world projects that demand clarity, discipline, and reliable problem-solving.

PROFESSIONAL EXPERIENCE

Python Developer 9/2023 – Present

Fiverr **|** *Remote*

- Delivered Python-based solutions for automation, data handling, and general-purpose scripting according to client specifications.
- Developed and maintained small utilities, including file processors, data cleaners, and API interaction scripts.
- Conducted debugging, code reviews, and incremental improvements to ensure stable and maintainable project outputs.
- Managed client communication, requirement gathering, and timely delivery of agreed project milestones.

Generative AI Intern 10/2024 – 12/2024

Nuexus Technologies **|** *Remote | Reference ID: NUAI242510039*

- Assisted in preparing datasets, running evaluations, and supporting model testing activities for ongoing AI projects.
- Contributed to prompt design, documentation, and experimentation for tasks involving text processing and automation.
- Provided support in building internal prototypes by conducting research, organizing technical notes, and tracking experiment results.

EDUCATION

University of Azad Jammu & Kashmir, Muzaffarabad, AJ&K 2021 - 2025

Bachelor of Science in Artificial Intelligence

- Completed coursework in machine learning, deep learning, data structures, algorithms, and software engineering.
- Developed hands-on projects involving Python, AI model deployment, mobile app development, and automation workflows.
- Conducted a Final Year Project on an AI-powered handwritten exam paper digitizer with OCR and document-generation features.
- Gained practical exposure to research writing, technical reports, and presentation of AI-driven solutions.

SKILLS

Technical Skills: Python, Machine Learning, Artificial Intelligence, Data Analysis, Data Science.

Soft Skills: Communication, Teamwork, Problem-Solving, Adaptability.

Languages: English, Urdu.

CERTIFICATIONS

Artificial Intelligence (Machine Learning, Deep Learning) | *NAVTTC* | *Certificate* (Oct 2024)

- Completed structured training covering machine learning workflows, supervised and unsupervised learning, and introductory deep learning architectures.
- Gained exposure to real-world AI use cases and best practices for deploying ML pipelines.

Goggle AI Essentials / *Coursera* | *Certificate* (July 2024)

- Studied foundational concepts in AI, responsible AI practices, and practical use of AI tools for productivity and automation.
- Learned industry guidelines for safe, efficient, and ethical use of generative AI systems.

Free Artificial Intelligence Basic Course – Batch 01 / *Xeven Solutions* | *Certificate* (Sept 2023)

- Built foundational understanding of Python, data manipulation, and introductory AI concepts.
- Completed practical exercises involving basic algorithms, logic building, and introductory machine learning tasks.
- Learned essential development practices for writing clean, structured code and preparing datasets for AI models.

Machine Learning Specialization | *Coursera* | *Certificate* (July 2023)

- Covered end-to-end machine learning topics including regression, classification, regularization, clustering, and ML model evaluation.
- Completed programming assignments to implement core machine learning algorithms.
- Gained practical understanding of model selection, bias-variance trade-offs, and performance improvement techniques used in applied ML.

Projects

Examico – AI Power Exam Digitize | University of Azad Jammu and Kashmir | Final Year Project (October 2025)

- Completed under the supervision of Dr. Wajid Arshad Abbasi. Designed and implemented a system to convert handwritten exam papers into structured digital documents using OCR and preprocessing pipelines. Developed workflows for text extraction, noise reduction, layout detection, and automated formatting to produce clean, editable outputs. Integrated equation-handling logic to improve accuracy across diverse handwriting styles and subject domains.

Form Digitalize --- 2024

- Developed a real-time form digitization tool using OpenCV and the Gemini 1.5 Flash API. Built an interactive interface that detects hand gestures for selecting form types and overlays extracted content onto a custom-designed background for improved readability and presentation.

AI-Powered Tic-Tac-Toe Game with Single and Multi-Player Modes | Semester Project -- 2024

- Created a Tic-Tac-Toe game using Python and Tkinter with both single-player and multiplayer modes. Implemented an AI opponent using the Minimax algorithm to ensure optimal gameplay. Designed a graphical user interface and integrated logic for turn handling, win detection, and draw scenarios. Completed as part of the Artificial Intelligence course taught by Dr. Wajid Arshad Abbasi.

Transformer Health Analysis ---- 2024

- Performed Exploratory Data Analysis (EDA) on transformer health data, focusing on gas concentrations, electrical metrics, and key performance indicators. Conducted data cleaning, statistical evaluation, and visualization to identify trends, correlations, and early indicators of anomalies. Findings contributed to understanding factors influencing transformer Health Index and potential failure patterns.
